GREEN SCREAMER

OVERDRIVE

The BBE Green Screamer v2 is the next evolution of the classic "green" overdrive circuit. Completely redesigned and built from the ground up. The Green Screamer v2's modified circuit design yields greater transparency and versatility to provide overdrive aficionados with a solution to all their overdrive needs.

FEATURES

- Modified "Green" Overdrive Circuit
- 4558 Op-Amp
- 3-Position Deep Switch
- Selectable Input Buffer
- True Hardwire Bypass
- Through-Hole Construction PCB
- Compact Pedal Board Friendly Design
- Top Mounted Input, Output and DC Inlet
- 5 Year Warranty

OPERATIONS

Gain | This varies the amount of overdrive added to your signal. At low settings the Green Screamer v2 is a mild overdrive that can be used as a boost to push an amplifier into an overdriven state. Setting this control to higher settings offers increased gain, harmonics and tube-style compression that stays focused and responds dynamically to your hands and/or instruments volume control.

Output | This varies the Output of the Green Screamer v2. Depending on your application, you can set it higher to boost or lower to cut volume.

Tone | Determines the amount of high-frequencies added to your signal. At lower settings, the sound is warmer. Higher settings will yield pronounced upper-mids and bite to your sound.

Deep Switch | Passive 3-position switch fine-tunes (does not dramatically alter it) the low-end response of Green Screamer v2.

MODES

1. A subtle setting that adds just the right amount of bass to add body to your sound.
0. Stock TS circuit
2. A more noticeable setting that thickens and adds low-end dimension to your sound.

BUFFER

Switchable Buffer | Low impedance buffer circuit designed to preserve the tonal characteristics of your instrument, not color it. To change the setting of the buffer, use a small flat head screwdriver.
